DATA SHEET

BRUSH FOR POOL FISH PASS

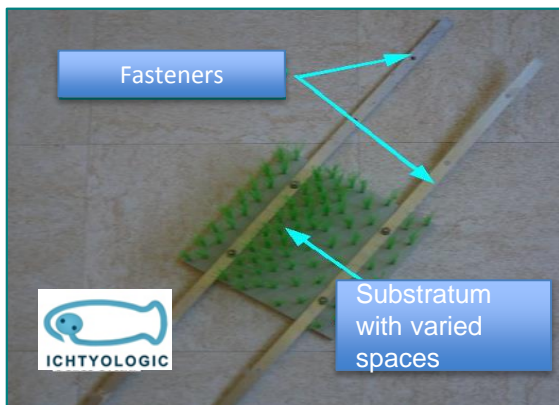

Many brushes for pool fish pass have been built during the last 20 years. They are equipped with indentations or slots linked with holes. The height of slopes make them selective for many species; only fishes incline of their with strong swimming capacities can use this equipment.

Specific brushes can be then fitted on indentations or holes in order to ameliorate the conditions of transit and reduce the selectivity.

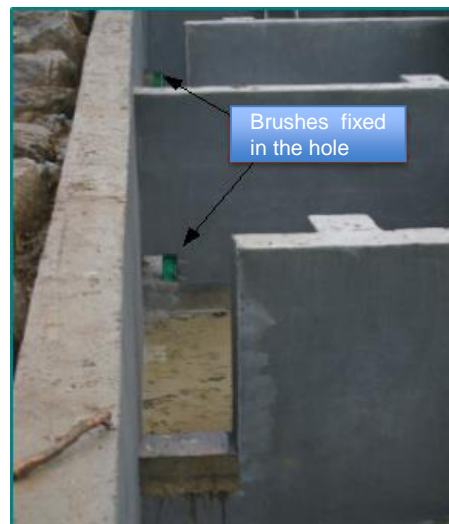

ADVANTAGES

Their adapted configuration allow them to present diversified conditions of passage adapted to the various crossing behaviours. This equipment is adapted to eels, river lampreys, and small fish species...

TECHNICAL CHARACTERISTICS

Plates 0,20m x 0,20m adapted to the width of walls from 0,15m to 0,30m.

Specific brushes with varied spaces.

Stainless bolt and screw.

For any other dimensions, please contact us.

INSTALLATION

After the draining of the pass, plates are fixed with four plugs at the bottom of the indentation and on the vertical surface of the hole. Several brushes can be juxtaposed.
