

DATA SHEET

EEL TRAPPING KIT

It is a basic element to the eel trapping kit. It has an upstream system that assures the irrigation of the equipment and eel trap. The crawling gutter with substratum insures the crossing of uneven gradients. The catch net allows stocking of eels in transit. This system will be supplied with water by a siphon or an electric pump not supplied.

ADVANTAGES

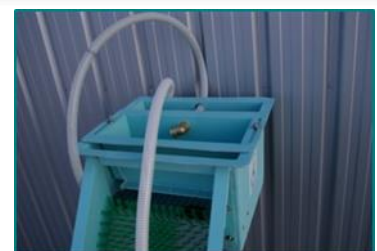

The system is adapted to the configuration of the site, the gradient and its fluctuations.

TECHNICAL CHARACTERISTICS

- Case of trapping and irrigation,
- Slope,
- Catching net,
- Gutter of flow of attraction and supply pipe.

ASSOCIATED SERVICES

- Establishment and conception study,
- Sites adaptation,
- Extension gutter, resting pool,
- Fixing system,
- Watch system.
